

POS – Paying with Credit Card Reader Not Integrated with the POS System

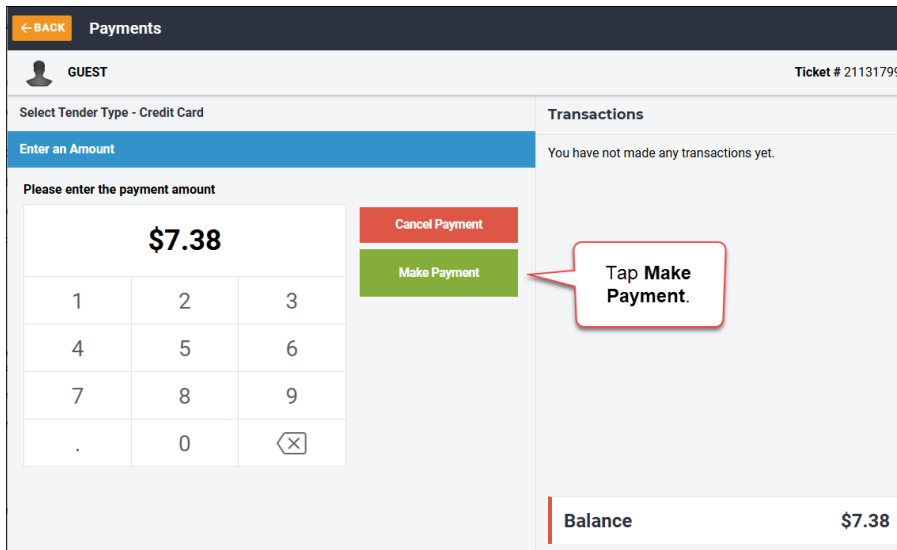

When checking out a diner, the Payment screen appears. From the Payments screen, you can pay the ticket credit card reader not integrated with the POS system.

1. Tap **Credit/Debit** (first screenshot below). The screen refreshes with the balance amount (second screenshot below).

2. On the credit card terminal, key in the balance amount and process the transaction. Wait for the accepted or rejected notification.
 - a. If accepted, proceed to step 3 (next page).
 - b. If rejected, then void/cancel the ticket.

3. Tap the **Make Payment** button.

4. The payment is applied as a credit card transaction and the screen refreshes accordingly with the payment details (screenshot below).
5. If the POS is configured to manually print receipts, then tap the **Print** button to print the receipt.
6. If the POS is configured to manually print close tickets, then tap the **Close Ticket** button to close the ticket.
